

# PERIYAR UNIVERSITY

NAAC 'A++' Grade with CGPA 3.61 (Cycle - 3)

Salem-636011, Tamilnadu, India.

## SYLLABUS FOR M.Sc. CHEMISTRY DEGREE OF MASTER OF SCIENCE

### CHOICE BASED CREDIT SYSTEM

**(For candidates admitted in the colleges affiliated to Periyar University  
from 2023-2024 onwards)**

**M.Sc., Chemistry Programme.**  
**Structure, course work, contact hours, credits and maximum internal and external marks for the students**  
**admitted in 2023-2024**

sem	Course	Title of the Course code	Contact Hr/Week	Credit	Int. Mark	Ext Mark	Total Mark

## 1. Preamble

Taxonomy forms three learning domains: the cognitive (knowledge), affective (attitude), and psychomotor (skill).

This classification enablesto estimate the learning capabilities of students.

Briefly, it is aimed to restructure the curriculum as student-oriented, skill-based, and institution-industry-interaction curriculum with the various courses under

"Outcome Based Education with Problem Based Courses, Project Based Courses, and Industry Aligned Programmes" having revised Bloom's Taxonomy for evaluating students skills.

### 1. Cognitive Domain

(Lower levels: K1: Remembering; K2: Understanding; K3: Applying; Higher levels: K4: Analysing; K5: Evaluating; K6: Creating)

### 2. Affective Domain

### 3. Psychomotor Domain

## 2. Structure of Course

Course Code	Course Name		Credits
Lecture Hours: (L) Per week	Tutorial Hours: (T) Per week	Lab Practice Hours: (P) Per week	Total: (L+T+P) Per week
Course Category:	Year & Semester:		Admission Year:
Pre-requisite			
Links to other Courses			
Learning Objectives: (for teachers: what they have to do in the class/lab/field)			
Course Outcomes: (for students: To know what they are going to learn) CO1: CO2: CO3: CO4: CO5:			
Recap: (not for examination) Motivation/previous lecture/relevant portions required for the course) [This is done during 2 Tutorial hours]			
Units	Contents		Required Hours
I			15
II			15
III			15
IV			15
V			15

<b>Extended Professional Component</b> (is a part to internal component only, Not to be included in the External Examination questionpaper)	<b>Questions related to the above topics ,from various competitive examinations UPSC/TRB/NET/UGC– CSIR/GATE/TNPSC/others to be solved (To be discussed during the Tutorial hour)</b>
---	--

<b>Skills acquired from the course</b>	<b>Knowledge ,Problem Solving ,Analytical ability ,Professional Competency Professional Communication and Transferrable Skill</b>
--	---

<b>Learning Resources:</b>
<ul style="list-style-type: none"> <li>• <b>Recommended Texts</b></li> <li>• <b>Reference Books</b></li> <li>• <b>Webresources</b></li> </ul>

<b>Board of Studies Date:</b>
-------------------------------

### 3. Learning and Teaching Activities

#### 3.1 Topicwise Delivery method

<b>Hour Count</b>	<b>Topic</b>	<b>Unit</b>	<b>Mode of Delivery</b>

#### 3.2 Work Load

The information below is provided as a guide to assist students in engaging appropriately with the course requirements.

<b>Activity</b>	<b>Quantity</b>	<b>Workload periods</b>
<b>Lectures</b>	<b>60</b>	<b>60</b>
<b>Tutorials</b>	<b>15</b>	<b>15</b>
<b>Assignments</b>	<b>5</b>	<b>5</b>
<b>Cycle Testorsimilar</b>	<b>2</b>	<b>4</b>
<b>Model Testorsimilar</b>	<b>1</b>	<b>3</b>
<b>University Exam</b>	<b>1</b>	<b>3</b>
	<b>Total</b>	<b>90 Periods</b>

#### Tutorial Activities

<b>Tutorial Count</b>	<b>Topic</b>

#### 4. Laboratory Activities

#### 5. Field Study Activities

#### 6. Assessment Activities

#### Assessment Principles:

Assessment for this course based on the following principles

1. Assessment must encourage and reinforce learning.
2. Assessment must measure achievement to the stated learning objectives.
3. Assessment must enable robust and fair judgments about student performance.
4. Assessment practice must be fair and equitable to students and give them the opportunity to demonstrate what they learned.
5. Assessment must maintain academic standards.

### Assessment Details:

Assessment Item	Distributed Due Date	Weightage	Cumulative Weightage
Assignment 1	3 <sup>rd</sup> week	2%	2%
Assignment 2	6 <sup>th</sup> Week	2%	4%
Cycle Test-I	7 <sup>th</sup> Week	6%	10%
Assignment 3	8 <sup>th</sup> Week	2%	12%
Assignment 4	11 <sup>th</sup> Week	2%	14%
Cycle Test-II	12 <sup>th</sup> Week	6%	20%
Assignment 5	14 <sup>th</sup> Week	2%	22%
Model Exam	15 <sup>th</sup> Week	13%	35%
Attendance	All weeks as per the Academic Calendar	5%	40%
University Exam	17 <sup>th</sup> Week	60%	100%

### 7. TEACHING METHODOLOGIES

- Traditional Teaching method like Chalk and Board, Virtual Classroom, LCD projector, Smart Class, Video Conference, Guest Lectures.
- Asking students to formulate a problem from a topic covered in a week's time Assignment, Class Test, Slip test
- Asking students to use state-of-the-art technologies/software to solve problems Applications, Use of Chemdraw, Chempaint software
- Introducing students to applications before teaching the theory
- Training students to engage in self-study without relying on faculty (for example – library and internet search, manual and handbook usage, etc.)
- Library, Net Surfing, Manuals, NPTEL Course Materials published in the website
- Other university websites.
- 

### 8. Faculty Course File Structure

### Elective Courses

Courses are grouped (Group A to Group F) so as to include topics from

Pure Chemistry (PC), Applied Chemistry (AC) and Industrial Components (IC) like pharmaceutical industries, Polymer lab sources for flexibility of choice by the stakeholders/institutions.

Semester I: Elective I and Elective II

Elective I to be chosen from Group A and Elective II to be chosen from Group B

Group A: (PC/AC/IC)

1. Pharmaceutical Chemistry
2. Nanomaterials and Nanotechnology

Group B: (PC/AC/IC)

1. Electrochemistry
2. Molecular Spectroscopy

Semester II: Elective III & Elective IV

Elective III to be chosen from Group C and Elective IV to be chosen from Group D  
Group C: (PC/AC/IC)

1. Medicinal Chemistry
2. Green Chemistry

Group D: (PC/AC/IC)

1. Bioinorganic Chemistry
2. Material Science

Semester III: Elective V

Elective V to be chosen from Group E.

Group E: (PC/AC/IC)

1. Pharmacognosy and Phytochemistry
2. Biomolecules and Heterocyclic compounds

Semester IV: Elective VI

Elective VI to be chosen from Group F.

Group F: (PC/AC/IC)

1. Chemistry of Natural products
2. Polymer Chemistry

### Skill Enhancement Courses

Skill Enhancement Courses are chosen to keep in pace with the latest developments in the academic / industrial front and provides flexibility of choice by the stakeholders / institutions.

Group G (Skill Enhancement Courses) SEC: (Practical based paper)

- Computational Chemistry
- 3D printing in Chemistry
- Preparation of Consumer products
- Chemistry in everyday life
- Cosmetic Chemistry
- Origin lab
- Industrial Chemistry
- Research Tools and Techniques

Ability Enhancement Courses

- Soft Skill courses

Extra Disciplinary Courses for other Departments (not for Mathematics students)

Students from other Departments may also choose any one of the following as Extra Disciplinary Course.

ED-I: Chemistry for Life Sciences

ED-II: Chemical conservation

ED-III: Chemistry in food preservation

ED-IV: Chemistry for Social studies

ED-V: Chemistry in consumer products

### 11. Instructions for Course Transaction

Courses	Lecture Hrs	Tutorial hrs	Lab Practice	Total hrs
<b>Core</b>	<b>75</b>	<b>15</b>	<b>--</b>	<b>90</b>
<b>Electives</b>	<b>75</b>	<b>15</b>	<b>--</b>	<b>90</b>
<b>ED</b>	<b>75</b>	<b>15</b>	<b>--</b>	<b>90</b>
<b>Lab Practice Courses</b>	<b>-</b>	<b>15</b>	<b>75</b>	<b>90</b>
<b>Project</b>	<b>20</b>	<b>--</b>	<b>70</b>	<b>90</b>

**12. Testing Pattern (25+75)****13.1 Internal****Assessment**

Theory Course: For theory courses there shall be three tests conducted by the faculty concerned and the average of the best two can be taken as the Continuous Internal Assessment (CIA) for a maximum of 25 marks. The duration of each test shall be one and a half hour.

Computer Laboratory Courses: For Computer Laboratory Oriented Courses, there shall be two tests in Theory part and two tests in Laboratory part. Choose one best from Theory part and other best from the two Laboratory part. The average of the best two can be treated as the CIA for a maximum of 25 marks. The duration of each test shall be one and a half hour.

There is no improvement for CIA of both theory and laboratory, and, also for University End Semester Examination.

**13.2 Written Examination: Theory Paper (Bloom's Taxonomy based)****Question Paper Model**

Intended Learning Skills	Maximum 75 Marks Passing Minimum: 50% Duration: Three Hours
	Part-A (10x2 = 20 Marks) Answer ALL questions Each Question carries 2 marks
Memory Recall/ Example/ Counter Example/ Knowledge about the Concepts/ Understanding	Two questions from each unit
	Question 1 to Question 10
	Part-B (5x5 = 25 Marks) Answer ALL questions Each question carries 5 Marks
Descriptions/ Application (problems)	Either-or Type Both parts of each question from the same unit
	Question 11(a) or 11(b) To Question 15(a) or 15(b)
	Part-C (3x 10 = 30 Marks) Answer any THREE questions Each question carries 10 Marks
Analysis/Synthesis/Evaluation	There shall be FIVE questions covering all the five units
	Question 16 to Question 20

Each question should carry the course outcome and cognitive level for instance,

1. [CO1:K2]Questionxxxx
2. [CO3:K1]Questionxxxx

#### 14. Different Types of Courses

##### (i) Core Courses (Illustrative)

1. Organic Reaction mechanism I & II
2. Structure and bonding in Inorganic compounds
3. Organic Chemistry Practical
4. Physical Chemistry-I & II
5. Inorganic Chemistry Practical
6. Organic synthesis and Photochemistry
7. Coordination Chemistry-I & II
8. Physical Chemistry Practical
9. Analytical Instrumentation technique practical

##### (ii) Elective Courses (ED within the Department Experts) (Illustrative)

1. Pharmaceutical Chemistry
2. Nanomaterials and Nanotechnology
3. Electrochemistry
4. Molecular Spectroscopy
5. Medicinal Chemistry
6. Green Chemistry
7. Pharmacognosy and Phytochemistry
8. Biomolecules and Heterocyclic compounds
9. Bio inorganic Chemistry
10. Material Science
11. Chemistry of Natural products
12. Polymer chemistry

##### (iii) Elective Courses (ED from other Department Experts)

##### (iv) Skill Development Courses

##### (v) Institution-Industry-Interaction (Industry aligned Courses)

Programmes /course work/field study/Modeling the Industry

Problem/Statistical Analysis/Commerce-Industry related problems/MOU  
with Industry and the like activities.

<b>Programme Code</b>	
<b>Duration</b>	<b>2 years for PG</b>
<b>Programme Outcomes (Pos)</b>	<p>PO1: Problem Solving Skill Apply knowledge of Management theories and Human Resource practices to solve business problems through research in Global context.</p> <p>PO2: Decision Making Skill Foster analytical and critical thinking abilities for data-based decision-making.</p> <p>PO3: Ethical Value Ability to incorporate quality, ethical and legal value-based perspectives to all organizational activities.</p> <p>PO4: Communication Skill Ability to develop communication, managerial and interpersonal skills.</p> <p>PO5: Individual and Team Leadership Skill Capability to lead themselves and the team to achieve organizational goals.</p> <p>PO6: Employability Skill Inculcate contemporary business practices to enhance employability skills in the competitive environment.</p> <p>PO7: Entrepreneurial Skill Equip with skills and competencies to become an entrepreneur.</p> <p>PO8: Contribution to Society Succeed in career endeavors and contribute significantly to society.</p> <p>PO 9 Multicultural competence Possess knowledge of the values and beliefs of multiple cultures and a global perspective.</p> <p>PO 10: Moral and ethical awareness/reasoning Ability to embrace moral/ethical values in conducting one's life.</p>
<b>Programme Specific Outcomes (PSOs)</b>	<p>PSO1 – Placement To prepare the students who will demonstrate respectful engagement with others' ideas, behaviors, beliefs and apply diverse frames of reference to decisions and actions.</p> <p>PSO 2 - Entrepreneur To create effective entrepreneurs by enhancing their critical thinking, problem solving, decision making and leadership skill that will facilitate startups and high potential organizations.</p> <p>PSO3 – Research and Development Design and implement HR systems and practices grounded in research that comply with employment laws, leading the organization towards growth and development.</p> <p>PSO4 – Contribution to Business World To produce employable, ethical and innovative professionals to sustain in the dynamic business world.</p> <p>PSO 5 – Contribution to the Society To contribute to the development of the society by collaborating with stakeholders for mutual benefit.</p>

**SEMESTER-I**

Title of the Course	<b>ORGANIC REACTION MECHANISM - I</b>						
Paper No.	<b>Core I</b>						
Category	<b>Core</b>	<b>Year</b>	<b>I</b>	<b>Credits</b>	<b>4</b>	<b>Course Code</b>	
		<b>Semester</b>	<b>I</b>				
Instructional hours per week	<b>Lecture</b>	<b>Tutorial</b>	<b>Lab Practice</b>			<b>Total</b>	
	<b>4</b>	<b>1</b>	<b>-</b>			<b>5</b>	
Prerequisites	Basic concepts of organic chemistry						
Objectives of the course	<p>To understand the feasibility and the mechanism of various organic reactions.</p> <p>To comprehend the techniques in the determination of reaction mechanisms.</p> <p>To understand the concept of stereochemistry involved in organic compounds.</p> <p>To correlate and appreciate the differences involved in the various types of organic reaction mechanisms.</p> <p>To design feasible synthetic routes for the preparation of organic compounds.</p>						
Course Outline	<p><b>UNIT-I: Methods of Determination of Reaction Mechanism:</b> Reaction intermediates, The transition state, Reaction coordinate diagrams, Thermodynamic and kinetic requirements of reactions: Hammond postulate. Methods of determining mechanism: non-kinetic methods - product analysis, determination of intermediates-isolation, detection, and trapping. Cross-over experiments, isotopic labelling, isotope effects and stereo chemical evidences. Kinetic methods - relation of rate and mechanism. Effect of structure on reactivity: Hammett and Taft equations. Linear free energy relationship, partial rate factor, substituent and reaction constants.</p>						
	<p><b>UNIT-II: Aromaticity, Aromatic and Aliphatic Electrophilic Substitution:</b></p> <p>Aromaticity in benzenoid, non-benzenoid, heterocyclic compounds and annulenes. Aromatic electrophilic substitution: Orientation and reactivity of di- and polysubstituted phenol, nitrobenzene and halobenzene. Reactions involving nitrogen electrophiles: nitration, nitrosation and diazonium coupling; Sulphur electrophiles: sulphonation; Halogen electrophiles: chlorination and bromination; Carbon electrophiles: Friedel-Crafts alkylation, acylation and arylation reactions. Aliphatic electrophilic substitution Mechanisms: SE<sub>2</sub> and SE<sub>i</sub>, SE<sub>1</sub>- Mechanism and evidences.</p>						

**UNIT-III:Aromatic and Aliphatic Nucleophilic Substitution:**

Aromatic nucleophilic substitution: Mechanisms -  $S_NAr$ ,  $S_N1$  and Benzyne mechanisms - Evidences - Reactivity, Effect of structure, leaving group and attacking nucleophile. Reactions: Oxygen and Sulphur-nucleophiles, Bucherer and Rosenmund reactions, von Richter, Sommelet- Hauser and Smiles rearrangements.  $S_N1$ , ion pair,  $S_N2$  mechanisms and evidences. Aliphatic nucleophilic substitutions at an allylic carbon, aliphatic trigonal carbon and vinyl carbon.  $S_N1$ ,  $S_N2$ ,  $S_Ni$ , and  $S_E1$  mechanism and evidences, Swain- Scott, Grunwald-Winstein relationship - Ambident nucleophiles.

**UNIT-IV:Stereochemistry-I:**

Introduction to molecular symmetry and chirality – axis, plane, center, alternating axis of symmetry. Optical isomerism due to asymmetric and dissymmetric molecules with C, N, S based chiral centers. Optical purity, prochirality, enantiotopic and diastereotopic atoms, groups, faces, axial and planar chirality, chirality due to helical shape, methods of determining the configuration. Racemic modifications: Racemization by thermal, anion, cation, reversible formation, epimerization, mutarotation. D, L system, Cram's and Prelog's rules: R, S-notations, proR, proS, side phase and re phase Cahn-Ingold-Prelog rules, absolute and relative configurations. Configurations of allenes, spiranes, biphenyls, cyclooctene, helicene, binaphthyls, ansa and cyclophanic compounds, exo-cyclic alkylidene-cycloalkanes. Topicity and prostereoisomerism, chiral shift reagents and chiral solvating reagents. Criteria for optical purity: Resolution of racemic modifications, asymmetric transformations, asymmetric synthesis, destruction. Stereoselective and stereospecific synthesis.

**UNIT-V:Stereochemistry-II:**

Conformation and reactivity of acyclic systems, intramolecular rearrangements, neighbouring group participation, chemical consequence of conformational equilibrium - Curtin-Hammett Principle. Stability of five and six-membered rings: mono-, di- and polysubstituted cyclohexanes, conformation and reactivity in cyclohexane systems. Fused and bridged rings: bicyclic, poly cyclic systems, decalins and Brett's rule. Optical rotation and optical rotatory dispersion, conformational asymmetry, ORD curves, octant rule, configuration and conformation, Cotton effect, axial haloketone rule and determination of configuration.

Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

**3 – Strong, 2 – Medium, 1 – Low**

<b>Methods of Evaluation</b>		
Internal Evaluation	Continuous Internal Assessment Test	25 Marks
	Assignments	
	Seminars	
	Attendance and Class Participation	
External Evaluation	End Semester Examination	75 Marks
	Total	100 Marks
<b>Methods of Assessment</b>		
Recall (K1)	Simple definitions, MCQ, Recall steps, Concept definitions.	
Understand/ Comprehend (K2)	MCQ, True/False, Short essays, Concept explanations, short summary or overview.	
Application (K3)	Suggest idea/concept with examples, suggest formulae, solve problems, Observe, Explain.	
Analyze (K4)	Problem-solving questions finish a procedure in many steps, Differentiate between various ideas, Map knowledge.	
Evaluate (K5)	Longer essay/ Evaluation essay, Critique or justify with pros and cons.	
Create (K6)	Check knowledge in specific or offbeat situations, Discussion, Debating or Presentations.	

In order to avoid pull the score down of each PO, it is suggested that the usage L-Low (1) to the minimum.

The S, M, L is based on the course outcome. The mapping is based on the revised Bloom's Taxonomy Verbs used to describe your course outcome.

- Remember and Understanding – Lower level
- Apply and Analyze – Medium Level
- Evaluate and Create – Strong Level

<b>Title of the Course</b>	<b>STRUCTURE AND BONDING IN INORGANIC COMPOUNDS</b>						
<b>Paper No.</b>	<b>Core II</b>						
<b>Category</b>	<b>Core</b>	<b>Year</b>	<b>I</b>	<b>Credits</b>	<b>4</b>	<b>Course Code</b>	
		<b>Semester</b>	<b>I</b>				
<b>Instructional hours per week</b>	<b>Lecture</b>	<b>Tutorial</b>	<b>Lab Practice</b>		<b>Total</b>		
	<b>4</b>	<b>1</b>	<b>-</b>		<b>5</b>		
<b>Prerequisites</b>	<b>Basic concepts of Inorganic Chemistry</b>						
Objectives of the course	<p>To determine the structural properties of main group compounds and clusters.</p> <p>To gain fundamental knowledge on the structural aspects of ionic crystals.</p> <p>To familiarize various diffraction and microscopic techniques.</p> <p>To study the effect of point defects and line defects in ionic crystals.</p> <p>To evaluate the structural aspects of solids.</p>						
Course Outline	<b>UNIT-I: Structure of main group compounds and clusters:</b>						
	<p>VB theory – Effect of lone pair and electro negativity of atoms (Bent’s rule) on the geometry of the molecules; Structure of silicates - applications of Paulings rule of electrovalence - isomorphous replacements in silicates – ortho, meta and pyro silicates – one dimensional, two dimensional and three-dimensional silicates. Structure of silicones, Structural and bonding features of B-N, S-N and P-N compounds; Poly acids – types, examples and structures; Borane cluster: Structural features of closo, nido, arachano and klado; carboranes, hetero and metalloboranes; Wade’s rule to predict the structure of borane cluster; main group clusters –zintl ions and mno rule.</p>						
	<b>UNIT-II: Solid state chemistry – I:</b>						
	<p>Ionic crystals: Packing of ions in simple, hexagonal and cubic close packing, voids in crystal lattice, Radius ratio, Crystal systems and Bravis lattices, Symmetry operations in crystals, glide planes and screw axis; point group and space group;Solid state energetics: Lattice energy – Born-Lande equation - Kapustinski equation, Madelung constant.</p>						
	<b>UNIT-III: Solid state chemistry – II:</b>						
	<p>Structural features of the crystal systems: Rock salt, zinc blende &amp; wurtzite, fluorite and anti-fluorite, rutile and anatase, cadmium iodide and nickel arsenide; Spinel -normal and inverse types and perovskite</p>						

	structures. Crystal Growth methods: From melt and solution (hydrothermal, sol-gel methods) – principles and examples.
	<p><b>UNIT-IV:Techniques in solid state chemistry:</b></p> <p>X-ray diffraction technique: Bragg's law, Powder diffraction method – Principle and Instrumentation; Interpretation of XRD data – JCPDS files, Phase purity, Scherrer formula, lattice constants calculation; Systematic absence of reflections; Electron diffraction technique – principle, instrumentation and application. Electron microscopy – difference between optical and electron microscopy, theory, principle, instrumentation, sampling methods and applications of SEM and TEM.</p>
	<p><b>UNIT-V:Band theory and defects in solids</b></p> <p>Band theory – features and its application of conductors, insulators and semiconductors, Intrinsic and extrinsic semiconductors; Defects in crystals – point defects (Schottky, Frenkel, metal excess and metal deficient) and their effect on the electrical and optical property, laser and phosphors; Linear defects and its effects due to dislocations.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Course Learning Outcomes (for Mapping with POs and PSOs)	
Students will be able	
CO1: Predict the geometry of main group compounds and clusters.	
CO2: Explain about the packing of ions in crystals and apply the radius ratio rule to predict the coordination number of cations.	
CO3: Understand the various types of ionic crystal systems and analyze their structural features.	
CO4: Explain the crystal growth methods.	
CO5: To understand the principles of diffraction techniques and microscopic techniques.

Title of the Course	ORGANIC CHEMISTRY PRACTICAL						
Paper No.	Core III						
Category	Core	Year	I	Credits	4	Course Code	
		Semester	I				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	-	1	4		5		
Prerequisites	Basic concepts of organic chemistry						
Objectives of the course	<p>To understand the concept of separation, qualitative analysis and preparation of organic compounds.</p> <p>To develop analytical skill in the handling of chemical reagents for separation of binary and ternary organic mixtures.</p> <p>To analyze the separated organic components systematically and derivative them suitably.</p> <p>To construct suitable experimental setup for the organic preparations involving two stages.</p> <p>To experiment different purification and drying techniques for the compound processing.</p>						
Course Outline	UNIT-I: Separation and analysis: A. Two component mixtures. B. Three component mixtures.						
	UNIT-II: Estimations:  a) Estimation of Phenol (bromination) b) Estimation of Aniline (bromination) c) Estimation of Ethyl methyl ketone (iodimetry) d) Estimation of Glucose (redox) e) Estimation of Ascorbic acid (iodimetry) f) Estimation of Aromatic nitro groups (reduction) g) Estimation of Glycine (acidimetry) h) Estimation of Formalin (iodimetry) i) Estimation of Acetyl group in ester (alkalimetry) j) Estimation of Hydroxyl group (acetylation) k) Estimation of Amino group (acetylation)						
	UNIT-III: Two stage preparations: a) <i>p</i> -Bromoacetanilide from aniline b) <i>p</i> -Nitroaniline from acetanilide c) 1,3,5-Tribromobenzene from aniline d) Acetyl salicylic acid from methyl salicylate e) Benzilic acid from benzoin f) <i>m</i> -Nitroaniline from nitrobenzene g) <i>m</i> -Nitrobenzoic acid from methyl benzoate						
Extended Professional Component	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE / TNPSC others to be solved (To be discussed during the Tutorial hours)						
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Title of the Course	PHARMACEUTICAL CHEMISTRY						
Paper No.	Elective I						
Category	Elective	Year	I	Credits	4	Course Code	
		Semester	I				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	4	1	-		5		
Prerequisites	<b>Basic knowledge on drugs and doses</b>						
Objectives of the course	<p>To understand the advanced concepts of pharmaceutical chemistry.</p> <p>To recall the principle and biological functions of various drugs.</p> <p>To train the students to know the importance as well the consequences of various drugs.</p> <p>To have knowledge on the various analysis and techniques.</p> <p>To familiarize on the drug dosage and its structural activities.</p>						
Course Outline	<p><b>UNIT-I: Physical properties in Pharmaceuticals:</b></p> <p>Physical properties of drug molecule: physical properties. Refractive index- Definition, explanation, formula, importance, determination, specific &amp; molar refraction. Optical activity\rotation- monochromatic &amp; polychromatic light, optical activity, angle of rotation, specific rotation examples, measurement of optical activity. Dielectric constant &amp; Induced Polarization- Dielectric constant explanation &amp; determination. Rheology of pharmaceutical systems: Introduction, Definition, Applications, concept of viscosity, Newton's law of flow, Kinematic, Relative, Specific, Reduced &amp; Intrinsic viscosity. Newtonian system, non-Newtonian system- Plastic flow, Pseudoplastic flow, Dilatant flow. Viscosity measurements- selection of viscometer for Newtonian and non-Newtonian system.</p>						
	<p><b>UNIT-II:</b></p> <p>Isotopic Dilution analysis: principle and applications, Neutron activation analysis: Principle, advantages and limitations, Scintillation counters. Body scanning. Introduction to radiopharmaceuticals. Properties of various types of radiopharmaceuticals, Radiopharmaceuticals as diagnostics, as therapeutics, for research and sterilization, Physico Chemical Properties and drug action. Physico chemical properties of drugs (a) Partition coefficient, (b) solubility (c) surface activity, (d) degree of ionization.</p>						
	<p><b>UNIT-III: Drug dosage and product development:</b></p> <p>Introduction to drug dosage Forms &amp; Drug Delivery system –</p>						

	<p>Definition of Common terms. Drug Regulation and control, pharmacopoeias formularies, sources of drug, drug nomenclature, routes of administration of drugs products, need for a dosage form, classification of dosage forms. Drug dosage and product development. Introduction to drug dosage Forms &amp; Drug Delivery system – Definition of Common terms. Drug Regulation and control, pharmacopoeias formularies, sources of drug, drug nomenclature, routes of administration of drugs products, need for a dosage form, classification of dosage forms.</p>
	<p><b>UNIT-IV:Development of new drugs:</b></p> <p>Introduction, procedure followed in drug design, the research for lead compounds, molecular modification of lead compounds. Structure-Activity Relationship (SAR): Factors effecting bioactivity, resonance, inductive effect, isomerism, bioisosterism, spatial considerations, biological properties of simple functional groups, theories of drug activity, occupancy theory, rate theory, induced-fit theory, 4.3 Quantitative structure activity relationship (QSAR): Development of QSAR, drug receptor interactions, the additivity of group contributions, physico-chemical parameters, lipophilicity parameters, electronic parameter, ionization constants, steric parameters, chelation parameters, redox potential, indicator-variables.</p>
	<p><b>UNIT-V:Computers in Pharmaceutical Chemistry:</b></p> <p>Need of computers for chemistry. Computers for Analytical Chemists- Introduction to computers: Organization of computers, CPU, Computer memory, I/O devices, information storage, software components. Application of computers in chemistry: Programming in high level language (C++) to handle various numerical methods in chemistry – least square fit, solution to simultaneous equations, interpolation, extrapolation, data smoothing, and numerical differentiation and integrations.</p>
<p>Extended Professional Component (is a part of internal component only, Not to be included</p>	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE / TNPSC others to be solved (To be discussed during the Tutorial hours)</p>

in the external examination question paper)	
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Title of the Course	NANO MATERIALS AND NANO TECHNOLOGY						
Paper No.	Elective I						
Category	Elective	Year	I	Credits	4	Course Code	
		Semester	I				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	4	1	-		5		
Prerequisites	Basic knowledge of crystallography and material science						
Objectives of the course	<p>To understand the concept of nano materials and nano technology.</p> <p>To understand the various types of nano materials and their properties.</p> <p>To understand the applications of synthetically important nano materials.</p> <p>To correlate the characteristics of various nano materials synthesized by new technologies.</p> <p>To design synthetic routes for synthetically used new nano materials.</p>						
Course Outline	<p><b>UNIT-I: Introduction of nanomaterials and nanotechnologies</b></p> <p>Introduction-role of size, classification-0D, 1D, 2D, 3D. Synthesis-Bottom –Up, Top–Down, consolidation of Nano powders.Features of nanostructures, Background of nanostructures.Techniques of synthesis of nanomaterials, Tools of the nanoscience. Applications of nanomaterials and technologies.</p>						
	<p><b>UNIT-II: Bonding and structure of the nanomaterials</b></p> <p>Predicting the Type of Bonding in a Substance crystal structure.Metallic nanoparticles, Surfaces of Materials, Nanoparticle Size and Properties.Synthesis- Physical and chemical methods - inert gas condensation, arc discharge, laser ablation, sol-gel, solvothermal and hydrothermal-CVD-types, metallo organic, plasma enhanced, and low-pressure CVD. Microwave assisted and electrochemical synthesis.</p>						
	<p><b>UNIT-III: Mechanical properties of materials</b></p> <p>Theories relevant to mechanical properties.Techniques to study mechanical properties of nanomaterials, adhesion and friction, thermal properties of nanomaterialsNanoparticles: gold and silver, metal oxides: silica, iron oxide and alumina - synthesis and properties.</p>						
	<p><b>UNIT-IV: Electrical properties</b></p> <p>Conductivity and Resistivity, Classification of Materials based on Conductivity, magnetic properties, electronic properties of materials. Classification of magnetic phenomena.Semiconductor materials – classification-Ge, Si, GaAs, SiC, GaN, GaP, CdS, PbS. Identification of</p>						

	<p>materials as p and n –type semiconductor-Hall effect - quantum and anomalous, Hall voltage - interpretation of charge carrier density. Applications of semiconductors: p-n junction as transistors and rectifiers, photovoltaic and photogalvanic cell.</p> <p><b>UNIT-V:Nano thin films, nanocomposites</b></p> <p>Application of nanoparticles in different fields. Core-shellnanoparticles-types,synthesis,andproperties.Nanocomposites-metal-,ceramic-andpolymer-matrixcomposites-applications.</p> <p>Characterization–SEM, TEM and AFM- principle,instrumentationand applications.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>
Skills acquired from this course	<p>Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.</p>

Title of the Course	<b>ELECTROCHEMISTRY</b>						
Paper No.	<b>Elective II</b>						
Category	Elective	Year	I	Credits	4	Course Code	
		Semester	I				
Instructional hours per week	Lecture	Tutorial	Lab Practice			Total	
	4	1	-			5	
Prerequisites	<b>Basic knowledge of electrochemistry</b>						
Objectives of the course	<p>To understand the behavior of electrolytes in terms of conductance, ionic atmosphere, interactions.</p> <p>To familiarize the structure of the electrical double layer of different models.</p> <p>To compare electrodes between current density and over potential.</p> <p>To discuss the mechanism of electrochemical reactions.</p> <p>To highlight the different types of over voltages and its applications in electroanalytical techniques.</p>						
Course Outline	<p><b>UNIT-I: Ionics:</b></p> <p>Arrhenius theory -limitations, van't Hoff factor and its relation to colligative properties. Deviation from ideal behavior. Ionic activity, mean ionic activity and mean ionic activity coefficient-concept of ionic strength, Debye Huckel theory of strong electrolytes, activity coefficient of strong electrolytes Determination of activity coefficient ion solvent and ion-ion interactions. Born equation. Debye-Huckel Bjerrum model. Derivation of Debye-Huckel limiting law at appreciable concentration of electrolytes modifications and applications. Electrolytic conduction- Debye-Huckel Onsager treatment of strong electrolyte-qualitative and quantitative verification and limitations. Evidence for ionic atmosphere. Ion association and triple ion formations.</p> <p><b>UNIT-II: Electrode-electrolyte interface:</b></p> <p>Interfacial phenomena -Evidences for electrical double layer, polarizable and non-polarizable interfaces, Electrocapillary phenomena - Lippmann equation electro capillary curves. Electro-kinetic phenomena electro-osmosis, electrophoresis, streaming and sedimentation potentials, colloidal and poly electrolytes. Structure of double layer: Helmholtz -Perrin, Guoy- Chapman and Stern models of electrical double layer. Zeta potential and potential at zero charge. Applications and limitations.</p>						

	<p><b>UNIT-III:Electrodics of Elementary Electrode Reactions:</b></p> <p>Behavior of electrodes: Standard electrodes and electrodes at equilibrium. Anodic and Cathodic currents, condition for the discharge of ions. Nernst equation,polarizable and non-polarizable electrodes. Model of three electrode system, over potential.Rate of electro chemical reactions: Rates of simple elementary reactions. Butler-Volmer equation-significance of exchange current density, net current density and symmetry factor. Low and high field approximations. symmetry factor and transfer coefficient Tafel equations and Tafel plots.</p> <p><b>UNIT-IV:Electrodics of Multistep Multi Electron System:</b></p> <p>Rates of multi-step electrode reactions, Butler - Volmer equation for a multi-step reaction. Rate determining step, electrode polarization and depolarization. Transfer coefficients, its significance and determination,Stoichiometric number. Electro-chemical reaction mechanisms-rate expressions, order, and surface coverage. Reduction of <math>I^3^-</math>, <math>Fe^{2+}</math>, and dissolution of Fe to <math>Fe^{2+}</math>. Overvoltage - Chemical and electro chemical, Phase, activation and concentration over potentials. Evolution of oxygen and hydrogen at different pH. Pourbiax and Evan's diagrams.</p> <p><b>UNIT-V:Concentration Polarization, Batteries and Fuel cells:</b></p> <p>Modes of Transport of electro active species - Diffusion, migration and hydrodynamic modes. Role of supporting electrolytes. Polarography-principle and applications. Principle of square wave polarography. Cyclic voltammetry- anodic and cathodic stripping voltammetry and differential pulse voltammetry. Sodium and lithium-ion batteries and redox flow batteries. Mechanism of charge storage: conversion and alloying. Capacitors- mechanism of energy storage, charging at constant current and constant voltage.Energy production systems: Fuel Cells: classification, alkaline fuel cells, phosphoric acid fuel cells, high temperature fuel cells.</p>
<p>Extended Professional Component (is a part of internal component only, Not to be included</p>	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>

in the external examination question paper)	
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Title of the Course	MOLECULAR SPECTROSCOPY						
Paper No.	Elective II						
Category	Elective	Year	I	Credits	4	Course Code	
		Semester	I				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	4	1	-		5		
Prerequisites	Basic knowledge of spectroscopy						
Objectives of the course	<p>To understand the influence of rotation and vibrations on the spectra of the polyatomic molecules.</p> <p>To study the principle of Raman spectroscopy, ESR spectroscopy, EPR spectroscopy and fragmentation patterns in Mass spectroscopy.</p> <p>To highlight the significance of Franck-Condon principle to interpret the selection rule, intensity and types of electronic transitions.</p> <p>To interpret the first and second order NMR spectra in terms of splitting and coupling patterns using correlation techniques such as COSY, HETCOR, NOESY.</p> <p>To carry out the structural elucidation of molecules using different spectral techniques.</p>						
Course Outline	<p><b>UNIT-I: Rotational and Raman Spectroscopy:</b></p> <p>Rotational spectra of diatomic and polyatomic molecules. Intensities of rotational spectral lines, effect of isotopic substitution. Non-rigid rotators. Classical theory of the Raman effect, polarizability as a tensor, polarizability ellipsoids, quantum theory of the Raman effect, Pure rotational Raman spectra of linear and asymmetric top molecules, Stokes and anti-Stokes lines. Vibrational Raman spectra, Raman activity of vibrations, rule of mutual exclusion, rotational fine structure- O and S branches, Polarization of Raman scattered photons.</p>						
	<p><b>UNIT-II: Vibrational Spectroscopy:</b></p> <p>Vibrations of molecules, harmonic and anharmonic oscillators- vibrational energy expression, energy level diagram, vibrational wave functions and their symmetry, selection rules, expression for the energies of spectral lines, computation of intensities, hot bands, effect of isotopic substitution. Diatomic vibrating rotor, vibrational-rotational spectra of diatomic molecules, P, R branches, breakdown of the Born-Oppenheimer approximation. Vibrations of polyatomic molecules – symmetry properties, overtone and combination frequencies. Influence of rotation on vibrational spectra of polyatomic molecule, P, Q, R branches, parallel and perpendicular vibrations of linear and symmetric top molecules.</p>						

**UNIT-III:Electronic spectroscopy:**

Electronic Spectroscopy: Electronic spectroscopy of diatomic molecules, Frank-Condon principle, dissociation and predissociation spectra.  $\pi \rightarrow \pi^*$ ,  $n \rightarrow \pi^*$  transitions and their selection rules. Photoelectron Spectroscopy: Basic principles, photoelectron spectra of simple molecules, Xray photoelectron spectroscopy (XPS). Lasers: Laser action, population inversion, properties of laser radiation, examples of simple laser systems.

**UNIT-IV: NMR and Mass Spectrometry:**

Chemical shift, Factors influencing chemical shifts: electronegativity and electrostatic effects; Mechanism of shielding and deshielding. Spin systems: First order and second order coupling of AB systems, Simplification of complex spectra. Spin-spin interactions: Homonuclear coupling interactions - AX, AX<sub>2</sub>, AB types. Vicinal, germinal and long-range coupling-spin decoupling. Nuclear Overhauser effect (NOE), Factors influencing coupling constants and Relative intensities. <sup>13</sup>CNMR and structural correlations, Satellites. Brief introduction to 2D NMR – COSY, NOESY. Introduction to <sup>31</sup>P, <sup>19</sup>F NMR. Mass Spectrometry: Ionization techniques- Electron ionization (EI), chemical ionization (CI), desorption ionization (FAB/MALDI), electrospray ionization (ESI), isotope abundance, molecular ion, fragmentation processes of organic molecules, deduction of structure through mass spectral fragmentation, high resolution. Effect of isotopes on the appearance of mass spectrum.

**UNIT-V:ESR and Mossbauer Spectroscopy:**

ESR spectroscopy Characteristic features of ESR spectra, line shapes and line widths; ESR spectrometer. The g value and the hyperfine coupling parameter (A), origin of hyperfine interaction. Interpretation of ESR spectra and structure elucidation of organic radicals using ESR spectroscopy; Spin orbit coupling and significance of g-tensors, zero/non-zero field splitting, Kramer's degeneracy, application to transition metal complexes (having one to five unpaired electrons) including biological molecules and inorganic free radicals. ESR spectra of magnetically dilute samples. Structural elucidation of organic

	compounds by combined spectral techniques. Principle of Mossbauer spectroscopy: Doppler shift, recoil energy. Isomer shift, quadrupole splitting, magnetic interactions. Applications: Mossbauer spectra of high and low-spin Fe and Sn compounds.
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

## **SEMESTER-II**

<b>Title of the Course</b>	<b>ORGANIC REACTION MECHANISM-II</b>						
<b>Paper No.</b>	<b>Core IV</b>						
<b>Category</b>	<b>Core</b>	<b>Year</b>	<b>I</b>	<b>Credits</b>	<b>4</b>	<b>Course Code</b>	
		<b>Semester</b>	<b>II</b>				
<b>Instructional hours per week</b>	<b>Lecture</b>	<b>Tutorial</b>	<b>Lab Practice</b>			<b>Total</b>	
	<b>4</b>	<b>1</b>	<b>-</b>			<b>5</b>	
<b>Prerequisites</b>	<b>Basic knowledge of organic chemistry</b>						
<b>Objectives of the course</b>	<p>To understand the concept of aromaticity in benzenoid, non-benzenoid, heterocyclic and annulene compounds.</p> <p>To understand the mechanism involved in various types of organic reactions with evidences.</p> <p>To understand the applications of synthetically important reagents.</p> <p>To correlate the reactivity between aliphatic and aromatic compounds.</p> <p>To design synthetic routes for synthetically used organic reactions.</p>						
<b>Course Outline</b>	<b>UNIT-I: Elimination and Free Radical Reactions and Mechanisms:</b>						
	<p>E2, E1, and E1cB mechanisms. Syn- and anti-eliminations. Orientation of the double bond: Hoffmann and Saytzeff rules. Reactivity: Effect of substrate, attacking bases, leaving group and medium. Stereochemistry of eliminations in acyclic and cyclic systems, pyrolytic elimination. Long lived and short-lived radicals – Production of radicals by thermal and photochemical reactions, Detection and stability of radicals, characteristics of free radical reactions and free radical, Reactions of radicals, polymerization, addition, halogenations, aromatic substitutions, rearrangements. Reactivity: Reactivity on aliphatic, aromatic substrates, reactivity in the attacking radical, effect of solvent.</p>						
<b>Course Outline</b>	<b>UNIT-II: Oxidation and Reduction Reactions and Mechanisms:</b>						
	<p>Direct electron transfer, hydride transfer, hydrogen transfer, displacement, addition-elimination, oxidative and reductive coupling reactions. Mechanism of oxidation reactions: Dehydrogenation by quinones, selenium dioxides, ferricyanide, mercuric acetate lead tetraacetate, permanganate, manganese dioxide, osmium tetroxide, oxidation of saturated hydrocarbons, alkyl groups, alcohols, halides and amines. Reactions involving cleavage of C-C bonds - cleavage of double bonds, oxidative decarboxylation, allylic oxidation, oxidation by chromium trioxide-pyridine, DMSO-Oxalyl chloride (Swern oxidation) and Corey-Kim oxidation, dimethyl sulphoxide- dicyclohexyl carbodiimide (DMSO-DCCD). Mechanism of reduction reactions: Wolff-</p>						

	<p>Kishner, Clemmenson, Rosenmund, reduction with Trialkyl and triphenyltin hydrides, McFadyen-Steven's reduction, Homogeneous hydrogenation, Hydroboration with cyclic systems, MPV and Bouveault-Blanc reduction.</p>
	<p><b>UNIT-III:Rearrangements:</b></p> <p>Rearrangements to electron deficient carbon: Pinacol-pinacolone and semi-pinacolone rearrangements -applications and stereochemistry, Wagner-Meerwein, Demjanov, Dienone-phenol, Baker-Venkataraman, Benzilic acid and Wolff rearrangements.Rearrangements to electron deficient nitrogen: Hofmann, Curtius, Schmidt, Lossen, Beckmann and abnormal Beckmann rearrangements. Rearrangements to electron deficient oxygen: Baeyer-Villiger oxidation and Dakin rearrangements. Rearrangements to electron rich atom: Favorskii, Quasi-Favorskii, Stevens, [1,2]-Wittig and [2,3]-Wittig rearrangements.Fries and Photo Fries rearrangement.Intramolecular rearrangements – Claisen, abnormal Claisen, Cope, oxy-Cope Benzidine rearrangements.</p>
	<p><b>UNIT-IV: Addition to Carbon Multiple Bonds and Mechanisms:</b></p> <p>(a) Addition to carbon-carbon multiple bonds- Addition reactions involving electrophiles, nucleophiles, free radicals, carbenes and cyclic mechanisms- Orientation and reactivity, hydrogenation of double and triple bonds, Michael reaction, addition of oxygen and Nitrogen; (b) Addition to carbon-hetero atom multiple bonds: Mannich reaction, acids, esters, nitrites, addition of Grignard reagents, Wittig reaction, Prinsreaction. Stereochemical aspects of addition reactions. Addition to Carbon-Hetero atom Multiplebonds: Addition of Grignard reagents, organozinc and organolithium reagents to carbonyl and unsaturated carbonyl compounds. Mechanism of condensation reactions involving enolates –Stobbe reactions.Hydrolysis of esters and amides, ammonolysis of esters.</p>
	<p><b>UNIT-V:Reagents and Modern Synthetic Reactions:</b></p> <p>Lithium diisopropylamine (LDA), Azobisisobutyronitrile (AIBN), Sodium cyanoborohydride (NaBH<sub>3</sub>CN), <i>meta</i>-Chloroperbenzoic acid (m-CPBA), Dimethyl aminopyridine (DMAP), n-Bu<sub>3</sub>SnD, Triethylamine (TEA), Diazobicyclo[5.4.0]undec-7-ene (DBU), Diisopropylazodicarboxylate (DIAD), Diethylazodicarboxylate (DEAD), <i>N</i>-bromosuccinimide (NBS), Trifluoroacetic acid (TFA), Tetramethyl piperidin-1-oxyl (TEMPO),</p>

	Phenyltrimethylammonium tribromide (PTAB). Diazomethane and Zn-Cu, Diethyl maleate (DEM), Copper diacetylacetonate ( $\text{Cu}(\text{acac})_2$ ), $\text{TiCl}_3$ , $\text{NaIO}_4$ , Pyridinium chlorochromate (PCC), Pyridinium dichromate (PDC), Meisenheimer complex. Suzuki coupling, Heck reaction, Negishi reaction, Baylis-Hillman reaction.
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE / TNPSC others to be solved (To be discussed during the Tutorial hours)

Title of the Course	PHYSICAL CHEMISTRY-I						
Paper No.	Core V						
Category	Core	Year	I	Credits	4	Course Code	
		Semester	II				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	4	1	-		5		
Prerequisites	Basic Concepts Of Physical Chemistry						
Objectives of the course	<p>To recall the fundamentals of thermodynamics and the composition of partial molar quantities.</p> <p>To understand the classical and statistical approach of the functions</p> <p>To compare the significance of Maxwell-Boltzman, Fermi-Dirac and Bose-Einstein</p> <p>To correlate the theories of reaction rates for the evaluation of thermodynamic parameters.</p> <p>To study the mechanism and kinetics of reactions.</p>						
Course Outline	<p><b>UNIT-I:Classical Thermodynamics:</b></p> <p>Partial molar properties-Chemical potential, Gibb's-Duhem equation-binary and ternary systems. Determination of partial molar quantities. Thermodynamics of real gases - Fugacity- determination of fugacity by graphical and equation of state methods-dependence of temperature, pressure and composition. Thermodynamics of ideal and non-ideal binary mixtures, Duhem - Margulus equation applications of ideal and non-ideal mixtures. Activity and activity coefficients-standard states - determination-vapour pressure, EMF and freezing point methods.</p>						
	<p><b>UNIT-II:Statistical thermodynamics:</b></p> <p>Introduction of statistical thermodynamics concepts of thermodynamic and mathematical probabilities-distribution of distinguishable and non-distinguishable particles. Assemblies, ensembles, canonical particles. Maxwell - Boltzmann, Fermi Dirac &amp; Bose-Einstein Statistics-comparison and applications. Partition functions-evaluation of translational, vibrational and rotational partition functions for monoatomic, diatomic and polyatomic ideal gases. Thermodynamic functions in terms of partition functions-calculation of equilibrium constants. Statistical approach to Thermodynamic properties: pressure, internal energy, entropy, enthalpy, Gibb's function, Helmholtz function residual entropy, equilibrium constants and equipartition principle. Heat capacity of mono and di atomic gases-ortho and para hydrogen. Heat capacity of solids-Einstein and Debye models.</p>						

	<p><b>UNIT-III:Irreversible Thermodynamics:</b></p> <p>Theories of conservation of mass and energy entropy production in open systems by heat, matter and current flow, force and flux concepts. Onsager theory-validity and verification- Onsager reciprocal relationships. Electro kinetic and thermo mechanical effects-Application of irreversible thermodynamics to biological systems.</p> <p><b>UNIT-IV:Kinetics of Reactions:</b></p> <p>Theories of reactions-effect of temperature on reaction rates, collision theory of reaction rates, Unimolecular reactions -Lindeman and Christiansen hypothesis- molecular beams, collision cross sections, effectiveness of collisions, Potential energy surfaces. Transition state theory-evaluation of thermodynamic parameters of activation-applications of ARRT to reactions between atoms and molecules, time and true order-kinetic parameter evaluation. Factors determine the reaction rates in solution - primary salt effect and secondary salt effect, Homogeneous catalysis- acid- base catalysis-mechanism of acid base catalyzed reactions-Bronsted catalysis law, enzyme catalysis-Michelis-Menton catalysis.</p> <p><b>UNIT-V:Kinetics of complex and fast reactions:</b></p> <p>Kinetics of complex reactions, reversible reactions, consecutive reactions, parallel reactions, chain reactions. Chain reactions-chain length, kinetics of <math>H_2 - Cl_2</math> &amp; <math>H_2 - Br_2</math> reactions (Thermal and Photochemical reactions) - Rice Herzfeld mechanism. Study of fast reactions-relaxation methods- temperature and pressure jump methods electric and magnetic field jump methods -stopped flow flash photolysis methods and pulse radiolysis. Kinetics of polymerization-free radical, cationic, anionic polymerization - Polycondensation.</p>
Extended Professional Component	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>
Skills acquired from this course	<p>Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.</p>

Title of the Course	INORGANIC CHEMISTRY PRACTICAL						
Paper No.	Core VI						
Category	Core	Year	I	Credits	4	Course Code	
		Semester	II				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	-	1	4		5		
Prerequisites	Basic principles of gravimetric and qualitative analysis						
Objectives of the course	<p>To understand and enhance the visual observation as an analytical tool for the quantitative estimation of ions.</p> <p>To recall the principle and theory in preparing standard solutions.</p> <p>To train the students for improving their skill in estimating the amount of ion accurately present in the solution</p> <p>To estimate metal ions, present in the given solution accurately without using instruments.</p> <p>To determine the amount of ions, present in a binary mixture accurately.</p>						
Course Outline	<p>UNIT-I: Analysis of mixture of cations: Analysis of a mixture of four cations containing two common cations and two rare cations. Cations to be tested.</p> <p>Group-I : W, Tl and Pb.</p> <p>Group-II : Se, Te, Mo, Cu, Bi and Cd.</p> <p>Group-III : Tl, Ce, Th, Zr, V, Cr, Fe, Ti and U.</p> <p>Group-IV : Zn, Ni, Co and Mn.</p> <p>Group-V : Ca, Ba and Sr.</p> <p>Group-VI : Li and Mg.</p>						
	<p>UNIT-II: Preparation of metal complexes: Preparation of inorganic complexes:</p> <p>a. Preparation of trithiourea copper(I) sulphate</p> <p>b. Preparation of potassium trioxalate chromate(III)</p> <p>c. Preparation of tetrammine copper(II) sulphate</p> <p>d. Preparation of Reineck's salt</p> <p>e. Preparation of hexathiourea copper(I) chloridedihydrate</p> <p>f. Preparation of <i>cis</i>-Potassium tri oxalate diaquachromate(III)</p> <p>g. Preparation of sodium trioxalato ferrate(III)</p> <p>h. Preparation of hexathiourea lead(II) nitrate</p>						
	<p>UNIT-III: Complexometric Titration:</p> <p>1. Estimation of zinc, nickel, magnesium, and calcium.</p> <p>2. Estimation of mixture of metal ions-pH control, masking and demasking agents.</p> <p>3. Determination of calcium and lead in a mixture (pH control).</p> <p>4. Determination of manganese in the presence of iron.</p> <p>5. Determination of nickel in the presence of iron.</p>						
Extended Professional Component (is a part of internal component only, Not to be included in the external examination)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE / TNPSC others to be solved</p> <p>(To be discussed during the Tutorial hours)</p>						

question paper)

Title of the Course	MEDICINAL CHEMISTRY						
Paper No.	Elective III						
Category	Elective	Year	I	Credits	4	Course Code	
		Semester	II				
Instructional hours per week	Lecture	Tutorial	Lab Practice			Total	
	4	1	-			5	
Prerequisites	Basic knowledge of medicinal chemistry						
Objectives of the course	<p>To study the chemistry behind the development of pharmaceutical materials.</p> <p>To gain knowledge on mechanism and action of drugs.</p> <p>To understand the need of antibiotics and usage of drugs.</p> <p>To familiarize with the mode of action of diabetic agents and treatment of diabetes.</p> <p>To identify and apply the action of various antibiotics.</p>						
Course Outline	<b>UNIT-I: Introduction to receptors:</b>						
	Introduction, targets, Agonist, antagonist, partial agonist. Receptors, Receptor types, Theories of Drug – receptor interaction, Drug synergism, Drug resistance, physicochemical factors influencing drug action.						
	<b>UNIT-II: Antibiotics:</b>						
	Introduction, Targets of antibiotics action, classification of antibiotics, enzyme-based mechanism of action, SAR of penicillins and tetracyclins, clinical application of penicillins, cephalosporin. Current trends in antibiotic therapy.						
	<b>UNIT-III: Antihypertensive agents and diuretics:</b>						
Classification of cardiovascular agents, introduction to hypertension, etiology, types, classification of antihypertensive agents, classification and mechanism of action of diuretics, Furosemide, Hydrochlorothiazide, Amiloride.							
<b>UNIT-IV: Antiviral and Antibacterial:</b>							
Classification of antiviral agents, Mechanism of action - Chloroquine Phosphate, Amodiaquine hydrochloride and Pyrimethamine. Antibacterial: Classification and mechanism of action - Sulphanilamide, Sulphapyridine, Sulphadiazine and Sulphisoxazole.							
<b>UNIT-V: Analgesics, Antipyretics and Anti-inflammatory Drugs:</b>							
Introduction, Mechanism of inflammation, classification and mechanism of action and paracetamol, Ibuprofen, Diclofenac, naproxen, indomethacin, phenylbutazone and meperidine. Medicinal Chemistry of Antidiabetic Agents Introduction, Types of diabetics, Drugs used for the							

	treatment, chemical classification, Mechanism of action, Treatment of diabetic mellitus. Chemistry of insulin, sulfonyl urea.

Title of the Course	GREEN CHEMISTRY						
Paper No.	Elective III						
Category	Elective	Year	I	Credits	4	Course Code	
		Semester	II				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	4	1	-		5		
Prerequisites	Basic knowledge of general chemistry						
Objectives of the course	<p>To discuss the principles of green chemistry.</p> <p>To propose green solutions for chemical energy storage and conversion.</p> <p>Propose green solutions for industrial production of Petroleum and Petrochemicals.</p> <p>Propose solutions for pollution prevention in Industrial chemical and fuel production, Automotive industry and Shipping industries.</p> <p>Propose green solutions for industrial production of Surfactants, Organic and inorganic chemicals.</p>						
Course Outline	<p>UNIT-I: Introduction Need for Green Chemistry. Goals of Green Chemistry. Limitations/ of Green Chemistry. Chemical accidents, terminologies, International green chemistry organizations and Twelve principles of Green Chemistry with examples.</p>						
	<p>UNIT-II: Choice of starting materials, reagents, catalysts and solvents in detail, Green chemistry in day today life. Designing green synthesis- green reagents: dimethyl carbonate. Green solvents: Water, Ionic liquids- criteria, general methods of preparation, effect on organic reaction. Supercritical carbon dioxide- properties, advantages, drawbacks and a few examples of organic reactions in scCO<sub>2</sub>. Green synthesis- adipic acid and catechol.</p>						
	<p>UNIT-III: Environmental pollution, Green Catalysis- Acid catalysts, Oxidation catalysts, Basic catalysts, Polymer supported catalysts- Poly styrene aluminum chloride, polymeric super acid catalysts, Poly supported photosensitizers.</p>						
	<p>UNIT-IV: Phase transfer catalysis in green synthesis- oxidation using hydrogen peroxide, crown ethers- esterification, saponification, anhydride formation, Elimination reaction, Displacement reaction. Applications in organic synthesis.</p>						
	<p>UNIT-V: Micro wave induced green synthesis- Introduction, Instrumentation, Principle and applications. Sonochemistry – Instrumentation, Cavitation theory - Ultra sound assisted green synthesis and Applications.</p>						
Extended	Questions related to the above topics, from various competitive

Title of the Course	BIO-INORGANIC CHEMISTRY					
Paper No.	Elective IV					
Category	Elective	Year	I	Credits	4	Course Code
		Semester	II			
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total	
	4	1	-		5	
Prerequisites	Basic knowledge of chemistry					
Objectives of the course	<p>To understand the role of trace elements.            To understand the biological significance of iron, sulphur.            To study the toxicity of metals in medicines.            To have knowledge on diagnostic agents.            To discuss on various metalloenzymes properties.</p>					
Course Outline	<p><b>UNIT-I: Essential trace elements:</b>            Selective transport and storage of metal ions: Ferritin, Transferrin and siderophores; Sodium and potassium transport, Calcium signalling proteins. Metalloenzymes, Zinc enzymes—carboxypeptidase and carbonic anhydrase. Ironenzymes—catalase, peroxidase. Copperenzymes – superoxide dismutase, Plastocyanin, Ceruloplasmin, Tyrosinase. Coenzymes - Vitamin-B12 coenzymes.</p>					
	<p><b>UNIT-II: Transport Proteins:</b>            Oxygen carriers-Hemoglobin and myoglobin - Structure and oxygenation Bohr Effect. Binding of CO, NO, CN<sup>-</sup> to Myoglobin and Hemoglobin. Biological redox system: Cytochromes-Classification, cytochrome a, b and c. Cytochrome P-450. Non-heme oxygen carriers- Hemerythrin and hemocyanin. Iron-sulphur proteins- Rubredoxin and Ferredoxin- Structure and classification.</p>					
	<p><b>UNIT-III: Nitrogen fixation:</b>            Introduction, types of nitrogen fixing microorganisms. Nitrogenase enzyme - Metal clusters in nitrogenase- redox property - Dinitrogen complex transition metal complexes of dinitrogen - nitrogen fixation via nitride formation and reduction of dinitrogen to ammonia. Photosynthesis, photosystem-I and photosystem-II-chlorophylls structure and function.</p>					
	<p><b>UNIT-IV: Metals in medicine:</b>            Metal Toxicity of Hg, Cd, Zn, Pb, As, Sb. Therapeutic Compounds, Vanadium-Based Diabetes Drugs; Platinum-Containing</p>					

	Anticancer Agents, Chelation, therapy, Cancer treatment. Diagnostic Agents, Technetium Imaging Agents; Gadolinium MRI Imaging Agents, temperature and critical magnetic Field.
	<b>UNIT-V: Enzymes :</b> Introduction and properties - nomenclature and classification. Enzyme kinetics, free energy of activation and the effects of catalysis. Michaelis-Menten equation - Effect of pH, temperature on enzyme reactions. Factors contributing to the efficiency of enzyme.

Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE / TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Course Learning Outcomes (for Mapping with POs and PSOs)	
Students will be able:	
CO1: The students will be able to analyse trace elements.	
CO2: Students will be able to explain the biological redox systems.	

CO3: Students will gain skill in analyzing the toxicity in metals.  
 CO4: Students will have experience in diagnosis.  
 CO5: Learn about the nitrogen fixation and photosynthetic mechanism.

Title of the Course	MATERIAL SCIENCE						
Paper No.	Elective IV						
Category	Elective	Year	I	Credits	4	Course Code	
		Semester	II				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	4	1	-		5		
Prerequisites	Basic knowledge of solid-state chemistry						
Objectives of the course	<p>To understand the crystal structure, growth methods and X-ray scattering.</p> <p>To explain the optical, dielectric and diffusion properties of crystals.</p> <p>To recognize the basis of semiconductors, superconductivity materials and magnets.</p> <p>To study the synthesis, classification and applications of nanomaterials.</p> <p>To learn about the importance of materials used for renewable energy conversion.</p>						
Course Outline	<p><b>UNIT-I:Crystallography:</b></p> <p>symmetry - unit cell and Miller indices -crystal systems - Bravais lattices - point groups and space groups - X-ray diffraction-Laue equations-Bragg's law-reciprocal lattice and its application to geometrical crystallography. Crystal structure–powder and single crystalapplications. Electron charge density maps, neutron diffraction-method and applications.</p>						
	<p><b>UNIT-II:Crystal growth methods:</b></p> <p>Nucleation–equilibrium stability and metastable state. Single crystal – Low and high temperature, solution growth– Gel and sol-gel. Crystal growthmethods-nucleation–equilibrium stabilityandmetastablestate.Singlecrystal–Lowandhightemperature, solution growth– Gel and sol-gel. Melt growth Bridgeman-Stockbarger,Czochralskimethods.Fluxtechnique,physicalandchemical vapourtransport.Lorentz and polarization factor - primary and secondary extinctions.</p>						
	<p><b>UNIT-III:Properties of crystals:</b></p> <p>Optical studies - Electromagnetic spectrum (qualitative) refractive index – reflectance – transparency, translucency and opacity. Types of luminescence – photo-, electro-, and injection luminescence, LEDs – organic, Inorganic and polymer LED materials - Applications. Dielectric studies- Polarisation - electronic, ionic, orientation, and space charge polarisation. Effect of temperature. dielectric constant, dielectric</p>						

	<p>loss. Types of dielectric breakdown—intrinsic, thermal, discharge, electrochemical and defect breakdown.</p> <p><b>UNIT-IV:Special Materials:</b></p> <p>Superconductivity: Meissner effect, Critical temperature and critical magnetic Field, Type I and II superconductors, BCS theory-Cooper pair, Applications.Soft and hard magnets – Domain theory Hysteresis Loop-Applications. Magneto and gian magneto resistance. Ferro, ferri and antiferromagnetic materials-applications, magnetic parameters for recording applications. Ferro-, Piezo-, and pyro electric materials – properties and applications. Shape memory Alloys-characteristics and applications, Non-linear optics-Second Harmonic Generators, mixing of Laser wavelengths by quartz, ruby and LiNbO<sub>3</sub>.</p> <p><b>UNIT-V:Materials for Renewable Energy Conversion:</b></p> <p>Solar Cells: Organic, bilayer, bulk heterojunction, polymer, perovskite based. Solar energy conversion: lamellar solids and thin films, dye-sensitized photo voltaic cells, coordination compounds anchored onto semiconductor surfaces - Ru(II) and Os(II) polypyridyl complexes. Photochemical activation and splitting of water, CO<sub>2</sub> and N<sub>2</sub>. Manganese based photo systems for water-splitting. Complexes of Rh, Ru, Pd and Pt - photochemical generation of hydrogen from alcohol.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>
Skills acquired from this course	<p>Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.</p>

<b>Title of the Course</b>	<b>SKILL ENHANCEMENT COURSE- I</b>						
	<b>INDUSTRIAL CHEMISTRY</b>						
<b>Paper No.</b>	<b>SEC-I</b>						
<b>Category</b>	<b>SEC</b>	<b>Year</b>	<b>I</b>	<b>Credits</b>	<b>2</b>	<b>Course Code</b>	
		<b>Semester</b>	<b>II</b>				
<b>Instructional hours per week</b>	<b>Lecture</b>	<b>Tutorial</b>	<b>Lab Practice</b>			<b>Total</b>	
	<b>2</b>	<b>1</b>	<b>-</b>			<b>3</b>	
<b>Prerequisites</b>	<b>Basic concepts of Industrial chemistry</b>						
Objectives of the course	<p>Knowledge of important chemical and reagents used in chemical industries.</p> <p>Understand the basic principle behind various mixtures used in chemical industries and their selection in respective applications.</p> <p>Understand the safety and Hazardous criteria related to unit process.</p> <p>Gain knowledge about fertilizer</p>						
Course Outline	<b>UNIT-I: Principles Of Chemical Technology</b>						
	<p>Introduction – basic principles of chemical technology – importance of chemical technology – classification of technological process – designing and modeling of chemical plants – unit process and unit operations. Basic requirements of industrial reactors – choice and selectivity of reactor – basic principles of homogeneous and heterogeneous processes and reactors with examples.</p>						
	<b>UNIT-II:Raw Materials And Energy For Chemical Industry</b>						
	<p>Raw materials – Characteristics of raw materials and their resources – methods of raw material concentration – integral utilization of raw materials. Energy for chemical industry – power and fuels – classification of fuels – coal – fuel gases and liquid fuels – petroleum – cracking – chemical corrosion – types of corrosion and preventive measures.</p>						
<b>UNIT-III:Small Scale Chemical Industries</b>							
<p>Electro-thermal and electro- chemical industries: electroplating – surface coating industries – oils, fats and waxes – soaps and detergents – cosmetics. Match industries and Fire Works: Manufacture of some industrially important chemicals like potassium chlorate, potassium nitrate, barium nitrate and red phosphorous – metal powders.</p>							
<b>UNIT-IV:Large Scale Chemical Industries</b>							
<p>Manufacturing process – raw materials – composition and uses of products in Portland cement – ceramics – plastics, synthetic fibres –</p>							

	<p>synthetic rubber – fertilizers – insecticides and pesticides – photo film industries – commercial aspects of starting an industry</p> <p><b>UNIT-V:Safety Signs And Colours Used In Industries</b></p> <p>– Industrial Hazards and Accidents – Classification of Hazards – Physical, chemical Biological, Ergonomic and stress Hazards – Causes, prevention and control – case study on industrial accidents</p> <p>– Bhopal gas Tragedy – Heat stress – sources and control – Noise pollution in industry – sources and control.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved</p> <p>(To be discussed during the Tutorial hours)</p>
Skills acquired from this course	<p>Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.</p>

## **SEMESTER-III**

Title of the Course	ORGANIC SYNTHESIS AND PHOTOCHEMISTRY						
Paper No.	Core VII						
Category	Core	Year	II	Credits	4	Course Code	
		Semester	III				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	4	1	-		5		
Prerequisites	Basic knowledge of organic chemistry						
Objectives of the course	<p>To understand the molecular complexity of carbon skeletons and the presence of functional groups and their relative positions.</p> <p>To study various synthetically important reagents for any successful organic synthesis.</p> <p>To apply disconnection approach and identifying suitable synthons to effect successful organic synthesis.</p> <p>To learn the concepts of pericyclic reaction mechanisms.</p> <p>To gain the knowledge of photochemical organic reactions.</p>						
Course Outline	<p><b>UNIT-I: Planning an Organic Synthesis and Control elements:</b></p> <p>Preliminary Planning – knowns and unknowns of the synthetic system studied, analysis of the complex and interrelated carbon framework into simple rational precursors, alternate synthetic routes, key intermediates that would be formed, available starting materials and resulting yield of alternative methods. Linear Vs convergent synthesis. synthesis based on umpolung concepts of Seebach, Control elements: Regioselective control elements and stereoselective control elements.</p>						
	<p><b>UNIT-II: Organic Synthetic Methodology: Retrosynthetic analysis:</b></p> <p>Alternate synthetic routes. Synthesis of organic mono and bifunctional compounds via disconnection approach. Protection of hydroxyl, carboxyl, carbonyl, thiol and amino groups. Illustration of protection and deprotection in synthesis. Use of protective groups, activating groups, and bridging elements. Functional group alterations and transposition.</p>						
	<p><b>UNIT-III: Pericyclic Reactions:</b></p> <p>Woodward Hoffmann Rules, The Mobius and Huckel concept, FMO, PMO method and correlation diagrams. Cycloaddition and retrocycloaddition reactions; [2+2], [2+4], [4+4], Cationic, anionic, and 1,3-dipolar cycloadditions. Chelotropic reactions. ; Electrocyclization and ring opening reactions of conjugated dienes and trienes.</p>						

	<p>Sigmatropic rearrangements: (1,3), (1,5), (3,3) and (5,5)-carbon migrations, degenerate rearrangements. Ionic sigmatropic rearrangements. Group transfer reactions. Regioselectivity, stereoselectivity and periselectivity in pericyclic reactions.</p> <p><b>UNIT-IV:Organic Photochemistry-I:</b></p> <p>Photochemical excitation: Experimental techniques; electronic transitions; Jablonskii diagrams; intersystem crossings; energy transfer processes; Stern Volmer equation.</p> <p>Reactions of electronically excited ketones; <math>\pi \rightarrow \pi^*</math> triplets; Norrish type-I and type-II cleavage reactions; photo reductions; Paterno-Buchi reactions;</p> <p><b>UNIT-V:Organic Photochemistry-II:</b></p> <p>Photochemistry of <math>\alpha,\beta</math>-unsaturated ketones; cis-trans isomerisation. Photon energy transfer reactions, Photo cycloadditions, Photochemistry of aromatic compounds; photochemical rearrangements; photo-stationary state; di-<math>\pi</math>-methane rearrangement; Reaction of conjugated cyclohexadienone to 3,4-diphenyl phenols; Barton's reactions.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>
Skills acquired from this course	<p>Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.</p>

Course Learning Outcomes (for Mapping with POs and PSOs)	
Students will be able: CO1: To recall the basic principles of organic chemistry and to understand the various reactions of organic compounds with reaction mechanisms. CO2: To understand the versatility of various special reagents and to correlate their reactivity with various reaction conditions. CO3: To implement the synthetic strategies in the preparation of various organic compounds. CO4: To predict the suitability of reaction conditions in the preparation of tailor-made organic compounds. CO5: To design and synthesize novel organic compounds with the methodologies learnt during the course.

Title of the Course	COORDINATION CHEMISTRY – I					
Paper No.	Core VIII					
Category	Core	Year	II	Credits	4	Course Code
		Semester	III			
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total	
	4	1	-		5	
Prerequisites	Basic knowledge of inorganic chemistry					
Objectives of the course	<p>To gain insights into the modern theories of bonding in coordination compounds.</p> <p>To learn various methods to determine the stability constants of complexes.</p> <p>To understand and construct correlation diagrams and predict the electronic transitions that are taking place in the complexes.</p> <p>To describe various substitution and electron transfer mechanistic pathways of reactions in complexes.</p> <p>To evaluate the reactions of octahedral and square planar complexes.</p>					
Course Outline	<p><b>UNIT-I: Modern theories of coordination compounds:</b></p> <p>Crystal field theory - splitting of d orbitals in octahedral, tetrahedral and square planar symmetries - measurement of <math>10Dq</math> - factors affecting <math>10Dq</math> - spectrochemical series - crystal field stabilisation energy for high spin and low spin complexes- evidences for crystal field splitting - site selections in spinels and antispinel - Jahn Teller distortions and its consequences. Molecular Orbital Theory and energy level diagrams concept of Weak and strong fields, Sigma and pi bonding in octahedral, square planar and tetrahedral complexes.</p> <p><b>UNIT-II: Spectral characteristics of complexes:</b></p> <p>Term states for d ions - characteristics of d-d transitions - charge transfer spectra - selection rules for electronic spectra - Orgel correlation diagrams - Sugano-Tanabe energy level diagrams - nephelauxetic series - Racah parameter and calculation of inter-electronic repulsion parameter.</p> <p><b>UNIT-III: Stability and Magnetic property of the complexes:</b></p> <p>Stability of complexes: Factors affecting stability of complexes, Thermodynamic aspects of complex formation, Stepwise and overall formation constants, Stability correlations, statistical factors and chelate effect, Determination of stability constant and composition of the complexes: Formation curves and Bjerrum's half method,</p>					

	<p>Potentiometric method, Spectrophotometric method, Ion exchange method, Polarographic method and Continuous variation method (Job's method)Magnetic property of complexes: Spin-orbit coupling, effect of spin-orbit coupling on magnetic moments, quenching of orbital magnetic moments.</p>
	<p><b>UNIT-IV:Kinetics and mechanisms of substitution reactions of octahedral and square planar complexes:</b></p> <p>Inert and Labile complexes; Associative, Dissociative and SN<sub>CB</sub> mechanistic pathways for substitution reactions; acid and base hydrolysis of octahedral complexes; Classification of metal ions based on the rate of water replacement reaction and their correlation to Crystal Field Activation Energy; Substitution reactions in square planar complexes: Trans effect, theories of trans effect and applications of trans effect in synthesis of square planar compounds; Kurnakov test.</p>
	<p><b>UNIT-V:Electron Transfer reactions in octahedral complexes:</b></p> <p>Outer sphere electron transfer reactions and Marcus-Hush theory; inner sphere electron transfer reactions; nature of the bridging ligand in inner sphere electron transfer reactions.Photo-redox, photo-substitution and photo-isomerisation reactions in complexes and their applications.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>
Skills acquired from this course	<p>Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.</p>

	-	1	4		5		
Prerequisites	Basic knowledge of physical chemistry						
Objectives of the course	<p>To understand the principle of conductivity experiments through conductometric titrations.</p> <p>To evaluate the order of the reaction, temperature coefficient, and activation energy of the reaction by following pseudo first order kinetics.</p> <p>To construct the phase diagram of two component system forming congruent melting solid and find its eutectic temperatures and compositions.</p> <p>To determine the kinetics of adsorption of oxalic acid on charcoal.</p> <p>To develop the potential energy diagram of hydrogen ion, charge density distribution and Maxwell's speed distribution by computational calculation.</p>						
Course Outline	UNIT-I: Conductivity Experiments <ol style="list-style-type: none"> <li>Determination of equivalent conductance of a strong electrolyte &amp; the verification of DHO equation.</li> <li>Verification of Ostwald's Dilution Law &amp; Determination of pKa of a weak acid.</li> <li>Verification of Kohlrausch's Law for weak electrolytes.</li> <li>Determination of solubility of a sparingly soluble salt.</li> <li>Acid-base titration (strong acid and weak acid vs NaOH).</li> <li>Precipitation titrations (mixture of halides only).</li> </ol>						
	UNIT-II: Kinetics <ol style="list-style-type: none"> <li>Study the kinetics of acid hydrolysis of an ester, determine the temperature coefficient and also the activation energy of the reaction.</li> <li>Study the kinetics of the reaction between acetone and iodine in acidic medium by half-life method and determine the order with respect to iodine and acetone.</li> </ol>						
	UNIT-III: Phase diagram Construction of phase diagram for a simple binary system <ol style="list-style-type: none"> <li>Naphthalene-phenanthrene</li> <li>Benzophenone- diphenyl amine</li> </ol> Adsorption Adsorption of oxalic acid on charcoal & determination of surface area (Freundlich isotherm only).						
Extended Professional Component	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved(To be discussed during the Tutorial hours)						
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Title of the Course	PHARMOCOGNOSY AND PHYTOCHEMISTRY						
Paper No.	Elective V						
Category	Elective	Year	II	Credits	4	Course Code	
		Semester	III				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	4	1	-		5		
Prerequisites	Basic knowledge of chemistry						
Objectives of the course	<p>To develop the knowledge of natural products, biological functions and pharmacological uses.</p> <p>To develop knowledge on primary and secondary metabolites and their sources.</p> <p>To understand the concepts of isolation methods and separation of bioactive compounds.</p> <p>To provide the knowledge on selected glycosides and marine drugs.</p> <p>To familiarize the guidelines of WHO and different sampling techniques.</p>						
Course Outline	<p><b>UNIT-I:</b> Pharmacognosy and Standardization of Herbal drugs: Introduction, definition, development classification and Source of Drugs: Biological, mineral, marine, and plant tissue cultures. Study of pharmacognosy of a crude drug. Biosynthesis: Shikimic acid pathway and acetate pathway. Systematic analysis of Crude drugs. Standardization of Herbal drugs. WHO guidelines, Sampling of crude drug, Methods of drug evaluation. Determination of foreign matter, moisture Ash value. Phytochemical investigations-General chemical tests.</p>						
	<p><b>UNIT-II:</b> Extraction Techniques: General methods of extraction, types – maceration, Decoction, percolation, Immersion and Soxhlet extraction.</p> <p>Advanced techniques- counter current, steam distillation, supercritical gases, sonication, Micro waves assisted extraction. Factors affecting the choice of extraction process.</p>						
	<p><b>UNIT-III:</b> Drugs containing Terpenoids and volatile oils, Terpenoids: Classification, Isoprene rule, Isolation and separation techniques, General properties Camphor, Menthol, Eucalyptol. Volatile Oils or Essential Oils: Method of Preparations, Classifications of Volatile oils, Camphor oil, Geranium oil, Citral- Structure uses. Pentacyclic triterpenoids: amyrynes; taraxasterol: Structure and pharmacological applications.</p>						

	<p><b>UNIT-IV:</b>Drugs containing alkaloids: Occurrence,function of alkaloids in plants, pharmaceutical applications. Isolation, Preliminary Qualitative tests and general properties. General methods of structural elucidation. Morphine, Reserpine, papaverine - chemical properties,structure and uses.</p> <p><b>UNIT-V:</b>Plant Glycosides and Marine drugs: Glycosides, Basic ring system, classification, isolation, properties, qualitative analysis. Pharmacological activity of Senna glycosides, Cardiacglycosides- Digoxin, digitoxin, Steroidal saponins glycosides- Diosgenin, hecogenin. Plant pigments: Occurrence and general methods of structure determination, isolation and synthesis of quercetin and cyanidin chloride.Marine drugs -Selected Drug Molecules: Cardiovascular active substances, Cytotoxic compounds, antimicrobial compounds, antibiotic compounds, Anti-inflammatory agents. Marine toxins.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

<b>Title of the Course</b>	<b>BIOMOLECULES AND HETEROCYCLIC COMPOUNDS</b>						
<b>Paper No.</b>	<b>Elective VI</b>						
<b>Category</b>	<b>Elective</b>	<b>Year</b>	<b>II</b>	<b>Credits</b>	<b>4</b>	<b>Course Code</b>	
		<b>Semester</b>	<b>III</b>				
<b>Instructional hours per week</b>	<b>Lecture</b>	<b>Tutorial</b>	<b>Lab Practice</b>		<b>Total</b>		
	<b>4</b>	<b>1</b>	<b>-</b>		<b>5</b>		
<b>Prerequisites</b>	<b>Basic knowledge of chemistry</b>						
Objectives of the course	<p>To learn the basic concepts and biological importance of biomolecules and natural products.</p> <p>To explain various of functions of carbohydrates, proteins, nucleic acids, steroids and hormones.</p> <p>To understand the functions of alkaloids and terpenoids.</p> <p>To elucidate the structure determination of biomolecules and natural products.</p> <p>To extract and construct the structure of new alkaloids and terpenoids from different methods.</p>						
Course Outline	<p><b>UNIT-I:</b>Chemistry and metabolism of carbohydrates: Definition, classification and biological role of carbohydrates. monosaccharides: Linear and ring structures (Haworth formula) of ribose, glucose, fructose and mannose (structure determination not required), physical and chemical properties of glucose and fructose.Disaccharides: Ring structures (Haworth formula) –occurrence, physical and chemical properties of maltose, lactose and sucrose. Polysaccharides: Starch, glycogen and cellulose – structure and properties, glycolysis of carbohydrates.</p>						
	<p><b>UNIT-II:</b> Steroids and Hormones:Steroids-Introduction, occurrence, nomenclature, configuration of substituents. Diels' hydrocarbon, stereochemistry, classification, biological importance, colour reactions of sterols, cholesterol-occurrence, tests, physiological activity, biosynthesis of cholesterol from squalene. Hormones-Introduction, classification, functions of sex hormones- androgens and estrogens, adrenocortical hormones-cortisone and cortisol structure and functions of non-steroidal hormones-adrenaline and thyroxin.</p>						
	<p><b>UNIT-III:</b>Proteins and nucleic acids: Separation and purification of proteins – dialysis, gel filtration and electrophoresis. Catabolism of amino acids - transamination, oxidative deamination and decarboxylation. Biosynthesis of proteins: Role of nucleic acids. Amino acid metabolism and ureacycle. Structure, methods for the synthesis of</p>						

	<p>nucleosides - direct combination, formation of heterocyclic base and nucleoside modification, conversion of nucleoside to nucleotides. Primary and secondary structure of RNA and DNA, Watson-Crick model, solid phase synthesis of oligonucleotides.</p> <p><b>UNIT-IV: Vitamins:</b> Introduction, Classification, Sources and deficiency diseases. Structural determination and synthesis of Vitamin A<sub>1</sub>, Vitamin B<sub>6</sub>, Vitamin B<sub>12</sub>, Folic acid, Vitamin H, Vitamin E and Vitamin K<sub>2</sub>.</p> <p><b>UNIT-V: Fused Ring Heterocyclic Compounds:</b> Benzofused five membered rings: Indole, isoindole, benzofuran and benzothiophene, Preparation and properties. Benzofused six membered rings: Quinoline and isoquinoline: Preparation by ring closure reactions, Reactions: Mechanism of electrophilic and nucleophilic substitutions, oxidation and reduction reactions.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>

**SEMESTER- IV**

<b>Title of the Course</b>	<b>COORDINATION CHEMISTRY – II</b>
<b>Paper No.</b>	<b>CoreX</b>

Category	Core	Year	II	Credits	4	Course Code	
		Semester	IV				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	4	1	-		5		
Prerequisites	<b>Basic knowledge of inorganic chemistry</b>						
Objectives of the course	<p>To recognize the fundamental concepts and structural aspects of organometallic compounds.</p> <p>To learn reactions of organometallic compounds and their catalytic behaviour.</p> <p>To identify or predict the structure of coordination compounds using spectroscopic tools.</p> <p>To understand the structure and bonding in coordination complexes.</p> <p>To evaluate the spectral characteristics of selected complexes.</p>						
Course Outline	<b>UNIT-I: Chemistry of organometallic compounds:</b>						
	<p>Classification of organometallic compounds based on M-C bond – 18 and 16 electron rule; Bonding in metal – olefin complexes (example: Ziese's salt), metal-acetylene and metal-allyl complexes; Metal-cyclopentadienyl complexes – Examples and MO approach to bonding in metallocenes; fluxional isomerism. Metal – carbonyl complexes: MO diagram of CO; Structure and bonding – bonding modes, MO approach of M-CO bonding, <math>\pi</math>-acceptor nature of carbonyl group, synergistic effect (stabilization of lower oxidation states of metals); Carbonyl clusters: Low nuclearity and high nuclearity carbonyl clusters – Structures based on polyhedral skeleton electron pair theory or Wade's rule.</p>						
	<b>UNIT-II: Reactions and catalysis of organometallic compounds:</b>						
	<p>Reactions of organometallic compounds: Oxidative addition, reductive elimination (<math>\alpha</math> and <math>\beta</math> eliminations), migratory insertion reaction and metathesis reaction. Organo-metallic catalysis: Hydrogenation of olefins (Wilkinson's catalyst), hydroformylation of olefins using cobalt or rhodium catalysts (oxo process), oxidation of olefin (Wacker process), olefin isomerisation, water gas shift reaction, cyclo-oligomerisation of acetylenes using Reppe's catalysts, Monsanto process.</p>						
	<b>UNIT-III: Inorganic spectroscopy -I:</b>						
	<p>IR spectroscopy Effect of coordination on the stretching frequency- sulphato, carbonato, sulphito, aqua, nitro, thiocyanato, cyano, thiourea, DMSO complexes; IR spectroscopy of carbonyl compounds. NMR spectroscopy- Introduction, applications of <math>^1\text{H}</math>, <math>^{15}\text{N}</math>, <math>^{19}\text{F}</math>, <math>^{31}\text{P}</math>-NMR</p>						

	<p>spectroscopy in structural identification of inorganic complexes, fluxional molecules, quadrupolar nuclei- effect in NMR spectroscopy.</p> <p><b>UNIT-IV: Inorganic spectroscopy-II:</b></p> <p>Introductory terminologies: g and A parameters-definition, explanation and factors affecting g and A; Applications of ESR to coordination compounds with one and more than one unpaired electrons – hyperfine and secondary hyperfine splitting and Kramer’s doublets; ESR spectra of V(II), Mn(II), Fe(II), Co(II), Ni(II), Cu(II) complexes, bis(salicylaldimine)copper(II) and <math>[(\text{NH}_3)_5\text{Co}-\text{O}_2-\text{Co}(\text{NH}_3)_5]^{5+}</math>. Mossbauer spectroscopy – Mossbauer effect, Recoil energy, Mossbauer active nuclei, Doppler shift, Isomer shift, quadrupole splitting and magnetic interactions. Applications of Mössbauer spectra to Fe and Sn compounds.</p> <p><b>UNIT-V:Photo Electron Spectroscopy:</b></p> <p>Theory, Types, origin of fine structures - shapes of vibrational fine structures – adiabatic and vertical transitions, PES of homonuclear diatomic molecules ( N<sub>2</sub>, O<sub>2</sub>) and heteronuclear diatomic molecules (CO, HCl) and polyatomic molecules (H<sub>2</sub>O, CO<sub>2</sub>, CH<sub>4</sub>, NH<sub>3</sub>) – evaluation of vibrational constants of the above molecules. Koopman’s theorem- applications and limitations.Optical Rotatory Dispersion – Principle of CD and ORD; <math>\Delta</math> and <math>\lambda</math> isomers in complexes, Assignment of absolute configuration using CD and ORD techniques.</p>
Extended Professional Component	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>
Skills acquired from this course	<p>Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.</p>

Title of the Course	PHYSICAL CHEMISTRY-II
---------------------	-----------------------

Paper No.	Core XI					
Category	Core	Year	II	Credits	4	Course Code
		Semester	IV			
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total	
	4	1	-		5	
Prerequisites	<b>Basic knowledge of physical chemistry</b>					
Objectives of the course	<p>To understand the essential characteristics of wave functions and need for the quantum mechanics.</p> <p>To know the importance of quantum mechanical models of particle in a box, rigid rotor and harmonic oscillator.</p> <p>To apply the quantum mechanics to hydrogen and polyelectronic systems.</p> <p>To familiarize the symmetry in molecules and predict the point groups.</p> <p>To predict the vibrational modes, hybridization using the concepts of group theory.</p>					
Course Outline	<p><b>UNIT-I: Introduction</b></p> <p>Wave particle duality, Uncertainty principle, Particle wave and Schrodinger wave equation, wave function, properties of wave function. Properties of wave function, Normalized, Orthogonal, orthonormal, Eigen values, Eigen functions, Hermitian properties of operators. Introduction to quantum mechanics-black body radiation, photoelectric effect, hydrogen spectrum. Need for quantum mechanics, Postulates of Quantum Mechanics, Schrodinger wave equation, Time independent and time dependent</p>					
	<p><b>UNIT-II: Quantum models:</b></p> <p>Particle in a box-1D, two dimensional and three-dimensional, degeneracy, application to linear conjugated molecular system, free particles, ring systems. Harmonic Oscillator-wave equation and solution, anharmonicity, force constant and its significance. Rigid Rotor-wave equation and solution, calculation of rotational constants and bond length of diatomic molecules.</p>					
	<p><b>UNIT-III: Applications to Hydrogen and Poly electron atoms:</b></p> <p>Hydrogen atom and hydrogen like ions, Hamiltonian-wave equation and solutions, radial and angular functions, representation of radial distribution functions. Approximation methods –variation methods: trial wave function, variation integral and application to particle in 1D box. Perturbation method - first order applications. Hartree-Fock self-consistent field method, Hohenberg-Kohn theorem and Kohn-Sham equation, Helium atom-electron spin, Pauli exclusion principle and Slater</p>					

	determination.
	<p><b>UNIT-IV: Group theory:</b></p> <p>Groups, sub groups, symmetry elements, operations, classification-axial and non-axial. Dihedral point groups- <math>C_n, C_{nh}, D_n, D_{nh}, D_{nd}, T_d</math> and <math>O_h</math>. Matrix representation and classes of symmetry operations, reducible irreducible and direct product representation. The Great orthogonality theorem – irreducible representation and reduction formula, construction of character table for <math>C_{2v}, C_{2h}, C_{3v}</math> and <math>D_{2h}</math> point groups.</p>
	<p><b>UNIT-V: Applications of quantum and group theory:</b></p> <p>Hydrogen Molecule-Molecular orbital theory and Heitler London (VB) treatment, Energy level diagram, Hydrogen molecule ion; Use of linear variation function and LCAO methods. Electronic conjugated system: Huckel method to Ethylene butadiene, cyclopropenyl, cyclobutadiene and Benzene. Applications of group theory to molecular vibrations, electronic spectra of ethylene.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Course Learning Outcomes (for Mapping with POs and PSOs) Students will be able: CO1: To discuss the characteristics of wave functions and symmetry functions. CO2: To classify the symmetry operation and wave equations. CO3: To apply the concept of quantum mechanics and group theory to predict the electronic structure. CO4: To specify the appropriate irreducible representations for theoretical applications. CO5: To develop skills in evaluating the energies of molecular spectra.

<b>Title of the Course</b>	<b>ANALYTICAL INSTRUMENTATION TECHNIQUE PRACTICAL(Industry Entrepreneurship)</b>
----------------------------	--

Paper No.	Elective VI					
Category	Core	Year	II	Credits	3	Course Code
		Semester	IV			
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total	
	-	-	4		4	
<b>Prerequisites</b>						
Objectives of the course	<p>To design chromatographic methods for identification of species.</p> <p>To analyze different constituents through instrumental methods of analysis.</p> <p>To evaluate different contaminants in materials using turbidimetry and conductivity measurements.</p> <p>To analyze constituents in materials using emission and absorption techniques.</p>					
Course Outline	<p>UNIT-I:</p> <ol style="list-style-type: none"> <li>Determination of the equivalent conductance of a weak acid at different concentrations and verifying Ostwald dilution law. Calculation of the dissociation constant of the acid.</li> <li>Determination of the equivalent conductance of a strong electrolyte at different concentrations and examining the validity of the Onsager's theory as limiting law at high dilutions.</li> <li>Conductometric titration of a mixture of HCl and CH<sub>3</sub>COOH Vs NaOH.</li> <li>Conductometric titration of NH<sub>4</sub>Cl Vs NaOH.</li> <li>Conductometric titration of CH<sub>3</sub>COONa Vs HCl.</li> <li>Potentiometric titration of a mixture of HCl and CH<sub>3</sub>COOH Vs NaOH</li> <li>Determination of pK<sub>a</sub> of weak acid by EMF method.</li> <li>Potentiometric titration of FAS Vs K<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub></li> <li>Potentiometric titration of KI Vs KMnO<sub>4</sub>.</li> <li>Potentiometric titration of a mixture of Chloride and Iodide Vs AgNO<sub>3</sub>.</li> <li>Determination of the pH of buffer solution by EMF method using Quinhydrone and Calomel electrode.</li> <li>Study of the inversion of cane sugar in the presence of acid by Polarimetric method.</li> </ol>					
	<p>UNIT-II</p> <ol style="list-style-type: none"> <li>Estimation of Fe, Cu and Ni by colorimetric method.</li> <li>Estimation of Na and K by flame photometric method. <ol style="list-style-type: none"> <li>Determination of spectrophotometrically the mole ratio of the ferrithiocyanate complex and equilibrium constant for the complex formation.</li> <li>Determination of the amount (mol/L) of ferricyanide present in the given solution using cyclic voltammetry.</li> <li>Determination of the diffusion coefficient of ferricyanide using cyclic voltammetry.</li> <li>Determination of the standard redox potential of ferri-ferrocyanide redox couple using cyclic voltammetry.</li> <li>Estimation of the amount of sulphate present in the given solution using Nephelometric turbidimeter.</li> </ol> </li> </ol>					

	<ol style="list-style-type: none"> <li>6. Estimation of the amount of nitrate present in the given solution using spectrophotometric method.</li> <li>7. Heavy metal analysis in textiles and textile dyes by AAS</li> <li>8. Determination of caffeine in soft drinks by HPLC</li> <li>9. Analysis of water quality through COD, DO, BOD measurements.</li> <li>10. Assay of Riboflavin and Iron in tablet formulations by spectrophotometry</li> <li>11. Estimation of chromium in steel sample by spectrophotometry</li> <li>12. Determination of Stern-Volmer constant of Iodine quenching by fluorimetry</li> <li>13. Determination of ascorbic acid in real samples using Differential Pulse Voltammetry and comparing with specifications</li> <li>14. Separation of (a) mixture of Azo dyes by TLC (b) mixture of metal ions by Paper chromatography</li> <li>15. Estimation of chlorophyll in leaves and phosphate in waste water by colorimetry.</li> <li>18. Estimation of Fe(II) by 1,10 phenanthroline using spectrophotometry</li> </ol>
	<p>UNIT-III: Interpretation and identification of the given spectra of various organic compounds arrived at from the following instruments</p> <ol style="list-style-type: none"> <li>1. UV-Visible</li> <li>2. IR</li> <li>3. Raman</li> <li>4. NMR</li> <li>5. ESR</li> <li>6. Mass etc.,</li> </ol>
<p>Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)</p>	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>

Students from other Departments may also choose any one of the following as Extra Disciplinary Course.

**ED-I: Chemistry for Life Sciences**

**ED-II: Chemical conservation**

**ED-III: Chemistry in food preservation**

**ED-IV: Chemistry for Social studies**

**ED-V: Chemistry in consumer products**

Title of the Course	EDC CHEMISTRY FOR FOOD PRESERVATION						
Paper No.	EDC-1						
Category	EDC	Year	I	Credits	2	Course Code	
		Semester	I				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	3		-		3		
Prerequisites	Basic concepts of Food preservation						
Objectives of the course	To learn important methods for food preservation are to ensure the quality of processed food. To prevent Microbial contaminations To kill pathogens. To minimize food spoilage and food poisoning.						
Course Outline	UNIT-I: A. Principles of Food Preservation a. Meaning, mode of action and changes in foods B. Use of High temperature (Heat preservation) . Moist and Dry heat methods a. Blanching b. Dehydration c. Concentration d. Canning e. Commercial sterilization f. Pasteurization						
	UNIT-II: A. Use of Low Temperatures a. Cold Preservation: Freezing and Refrigeration- Air freezing b. Indirect contact freezing c. Immersion freezing d. Dehydro-freezing e. Cryo-freezing f. Changes in foods during refrigeration and frozen storage B. Use of dehydration and Concentration . Benefits and factors affecting heat and mass transfer a. Physical and chemical changes during dehydration and concentration b. Methods and techniques used (Air convection, drum driers and vacuum driers) c. Use of various evaporators for concentration of						

	foods
	<p>UNIT-III:  Use of Ionizing radiation and microwave heating</p> <ol style="list-style-type: none"> <li>a. Ionizing radiations and sources</li> <li>b. Units of radiation</li> <li>c. Radiation effects</li> <li>d. Mechanism of microwave heating</li> <li>e. Application of radiation technology</li> </ol> <p>B. Use of Fermentation</p> <ol style="list-style-type: none"> <li>a. Benefits and mechanisms of fermentation</li> <li>b. Fermented food products e.g Beer, Wine, Soya sauce, Cheese, Soya bean products</li> <li>c. Microbial vs Industrial Fermentation</li> </ol>
	<p>UNIT-IV:  A. Use of Food Additives</p> <ol style="list-style-type: none"> <li>a. Broad classes</li> <li>b. Intentional and unintentional food additives</li> <li>c. Laws and regulations</li> </ol> <p>B. Food Enzymes and their applications in Food industry.  Application of Hurdle Technology</p> <ol style="list-style-type: none"> <li>a) Fermentation</li> </ol>
	<p>UNIT-V:  Recent advances in food preservation</p> <ol style="list-style-type: none"> <li>a. Pulse electric field special packaging</li> <li>b. Use of technology for minimal processing for preservation of fresh foods</li> <li>c. Use of Antioxidants in food preservation</li> <li>d. Cold pressed juices</li> <li>e. Use of Natural Preservatives</li> <li>f. Preservatives on food labels</li> </ol>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved  (To be discussed during the Tutorial hours)</p>

<b>Title of the Course</b>	<b>EDC</b>					
	<b>CHEMISTRY IN CONSUMER PRODUCTS</b>					
<b>Paper No.</b>	<b>EDC-II</b>					
<b>Category</b>	<b>EDC</b>	<b>Year</b>	<b>I</b>	<b>Credits</b>	<b>2</b>	<b>Course Code</b>
		<b>Semester</b>	<b>I</b>			
<b>Instructional hours per week</b>	<b>Lecture</b>	<b>Tutorial</b>	<b>Lab Practice</b>		<b>Total</b>	
	<b>2</b>		<b>-</b>		<b>2</b>	

<b>Prerequisites</b>	<b>Basic concepts of Consumer Products</b>
<b>Objectives of the course</b>	<b>To provide basic knowledge in consumer products in chemistry and modern trend in Industry.</b>
<b>Course Outline</b>	<b>UNIT-I: INORGANIC CONSUMER PRODUCTS</b> Ceramic materials – Preparation, Properties and Uses. Glass- Preparation, Properties and Uses. Graphite- Preparation, Properties and Uses. Silica Aerogel- Preparation, Properties and Uses.
	<b>UNIT-II:SOAPS AND DETERGENTS</b> Saponification of oils and fats. Manufacture of soaps. Formulation of toilet soaps. Different ingredients used. Their functions. Mechanism of action of soap. ISI specifications. Testing procedures/limits. Anionic detergents: Manufacture of LAB (linear alkyl benzene). Sulphonation of LAB preparation of acid slurry. Different ingredients in the formulation of detergent powders and soaps. Liquid detergents. Foam boosters. AOS (alpha olefin sulphonates. cationic detergents: examples. Manufacture and applications. Mechanism of action of detergents Comparison of soaps and detergents. Biodegradation – environmental effects. ISI specifications / limits.
	<b>UNIT-III:SHAMPOOS</b> Manufacture of SLS and SLES. Ingredients. Functions. Different kinds of shampoos – anti-dandruff, anti-lice, herbal and baby shampoos. Hair dye. Manufacture of conditioners. Coco betaines or coco diethanolamides – ISI specifications. Testing procedures and limits.
	<b>UNIT-IV:SKIN PREPARATIONS</b> Face and skin powders. Ingredients, functions. Different types. Snows and face creams. Chemical ingredients used. Anti perspirants. Sun screen preparations. UV absorbers. Skin bleaching agents. Depilatories. Turmeric and Neem preparations. Vitamin oil. Nail polishes: nail polish preparation, nail polish removers. Article removers. Lipsticks, roughes, eyebrow pencils. Ingredients and functions – hazards. ISI specifications.

	<p><b>UNIT-V:</b></p> <p>Leading firms, brand names, choosing the right product. Packing regulations. Marketing. Licensing – drug license – legal aspects. GMP – ISO 9000/12000 – consumer education. Evaluation of the product – advertisements.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>
